

Megaplex-4100/2100/2104

HS-703

4-Channel G.703 Codirectional Data Module

- Separate connector for each channel
- Enhanced diagnostics
- Parameter setting via Management System
- For any I/O slot of Megaplex-2100, Megaplex-2104 or Megaplex-4100

The HS-703 module provides Megaplex with four 64-kbps G.703 codirectional data channels. Each channel can be independently enabled or disabled by software configuration.

Any channel of the HS-703 module may be directed to any channel of another HS-703 module at the remote site (the remote module may also be any other G.703-compatible module). The timeslots used on the T1 or E1 links are individually assigned by the user for each channel.

An HS-703 channel, when connected to a remote low speed module, transparently transmits even multiplexed signals.

Transmit Pair timing (RX-OUT) is always locked to the Megaplex nodal timing.

For the Receive Pair timing (TX-IN), two timing modes are supported by the Megaplex system:

- Internal – where the G.703 timing source is locked to the Megaplex nodal timing.
- External – where the Megaplex nodal timing is locked to the receive pair timing of one of the HS-703 channels. This locks the Megaplex nodal timing to the external 640-kbps G.703 channel.

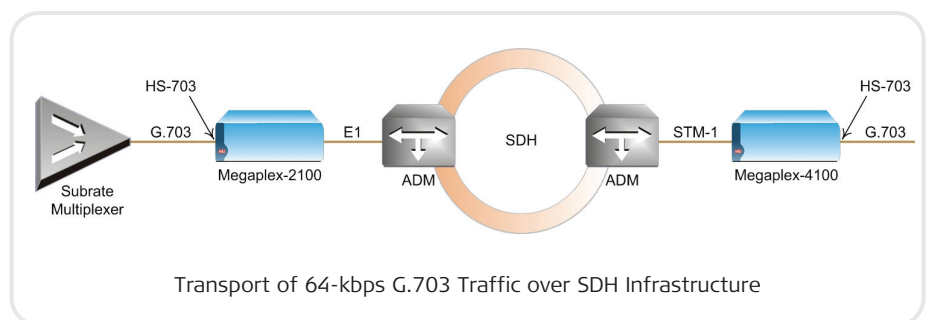

Extensive diagnostics include local and remote loopbacks and reduce the module downtime to a minimum.

Separate LED indicators for each channel show loss of signal (TX LOSS) or loss of octet timing (OOS).

Each channel terminates in a separate 8-pin RJ-45 connector.

All operating parameters of HS-703 are soft-selectable through the Megaplex management system.

Four 64-kbps G.703
codirectional data
channels

HS-703

4-Channel G.703 Codirectional Data Module

Specifications

Number of Data Channels

4

Data Rate per Channel

64 kbps

Interface

Codirectional, per ITU-T G.703

Connectors

RJ-45 (one for each channel)

Transmit Pair Timing (RX-OUT)

HS-703 channel timing is locked to Megaplex nodal timing

Receive Pair Timing (TX-IN)

Internal: locked to Megaplex nodal timing
 External: Megaplex nodal timing is locked to the external G.703 timing source from one of the HS-703 channels

Diagnostics (per channel)

Local loopback (towards local G.703 equipment)

Remote loopback (towards remote equipment)

Indicators (per channel)

TX LOSS (red) – loss of signal

OOS (red) – loss of octet timing

Configuration

Programmable via the Megaplex management system

Environment

Operating temperature: 0°C to 45°C (32°F to 113°F)

Storage temperature: -20°C to +70°C (-4°F to +160°F)

Humidity: up to 95%, non-condensing

Ordering

MP-2100M-HS-703

4-channel G.703 codirectional data module for MP-2100/2104 and MP-4100
